

# Bullfrog Spas' 120V Set-Up

**Bullfrog Series II 231 and SportX 131 Spas are shipped in a 120V configuration.**

The 3.0 BHP pumps in these spas are 120V, not 240V. Two minor changes must be made to the Balboa Control Pack upon installation of either of these spas.

1. A short jumper wire will be taped to the back of the Control Pack
  - a. Remove the jumper wire and connect it between the White AC terminal and the Red AC terminal. Both are found on the left side of the Pack above and below the Inbound Power Terminal
  
2. Ensure DIP switches #2 and #3 are both in the OFF position (Down Position).
  - a. This ensures that the heater will be turned OFF when the pump is on High, thereby ensuring the spa will not draw more than 20 Amps.
